Summary

Cloud Engineer with a strong foundation in cloud platforms, Terraform, Linux, Kubernetes, and Docker. Skilled in designing, deploying, and managing scalable and reliable infrastructure, with a focus on automation, security, and operational efficiency. Interested in contributing to high-impact cloud solutions in fast-paced environments.

Skills

Languages: C++, Java, HTML/CSS, JavaScript, SQL, MongoDB

Frameworks: React, Express, Node.js, .NET

Developer Tools: VS Code, Eclipse, Spring Tool Suite, Postman, GitHub Actions

Cloud & Technologies: OCI, AWS, Windows, Linux, GitHub, Docker, Kubernetes, Terraform, Ansible

AI Tools: GitHub Copilot, ChatGPT

Experience

Cloud Engineer

October 2024 – Present

Avaloq *Tools Used: Terraform, Linux, Oracle IDP, EntraID, PostgreSQL*

- Delivered **Infrastructure as Code (IaC)** using **Terraform** to automate cloud provisioning, secrets management, and environment setup across multiple deployments and regions.
- Automated **CI/CD pipelines**, **infrastructure maintenance**, and operational tasks to reduce manual effort and improve release reliability.
- Configured **networking**, **security policies**, and **high availability/DR** setups for cloud services and databases to meet SLA requirements.
- Integrated **monitoring and observability** tools to proactively detect issues and maintain system reliability.

Projects

File Transfer Service | Terraform, OCI, PostgreSQL, Oracle IDP, GitOps, CI/CD

2024 – Present

- Implemented **Single Sign-On (SSO)** across multiple regions using **Oracle IDP**, improving user experience by **~70%** and significantly reducing manual configuration effort.
- Designed and built **custom binary images** for the service, automating image creation and rollout whenever a new software version was released to ensure consistent, repeatable deployments.
- Applied **blue-green deployment** strategies to reduce downtime by **~95%** and improve release reliability and rollback safety.
- Built a **DevOps self-service web tool** (Python/Flask) to automate repetitive **NSG firewall rule** management and **blue/green deployments** across 7 multi-region OCI environments, using **GitOps** workflows with atomic commits and PRs via the **GitHub API**.
- Automated **SFTPGo user and virtual folder provisioning** using the **Terraform SFTPGo provider** (drakkan/sftpgo) with multi-region primary/secondary configuration aliases, eliminating manual setup.
- Architected and managed **high availability, scalability, and disaster recovery (DR)** configurations for cloud services and **PostgreSQL** databases across primary and secondary regions.
- Automated **certificate renewal**, **SSL/TLS updates**, and **infrastructure maintenance** tasks to ensure secure and uninterrupted service delivery.
- Built a reusable **Terraform component** for service configuration, designed to adapt across multiple region deployments and reduce onboarding time for new environments.
- Streamlined **CI/CD pipelines** (GitOps workflow) to automate build, test, and deployment of infrastructure and service versions, reducing release cycle time and human error.

Awards & Certifications

- **OCI Certified Associate Architect:** Completed Oracle Cloud Infrastructure associate-level architecture certification covering cloud services, networking, security, and deployments.

Education

Bachelor of Technology (Computer Science and Engineering)

Graduated: 2023

Government College of Engineering, Aurangabad

CGPA: 7.8
